

EDGAR GARCIA PADILLA

Visual Development Artist | AI Workflow Developer | Digital Composer

Guadalajara, Mexico • +52 333 157 1406 • edgarciaavfx@gmail.com
edgarciaavfx.github.io • github.com/edgarciaavfx • linkedin.com/in/edgarciaavfx

PROFESSIONAL SUMMARY

Digital Composer and technical artist with over 6 years of production experience across feature films, commercials, and complex VFX pipelines. Seamlessly bridges visual storytelling with robust tool development to eliminate technical bottlenecks and accelerate creative iteration. Actively focusing on the integration of modern machine learning and generative AI workflows (such as node-based ComfyUI and custom nodes) into production tooling to amplify the visual development process.

VFX & AI Portfolio: edgarciaavfx.github.io

Pipeline & Core Tools: github.com/edgarciaavfx

TECHNICAL SKILLS

Creative & AI Workflows	VFX & Compositing: Nuke, After Effects, DaVinci Resolve, ShotGrid workflows, FFmpeg / FFprobe
	Generative AI Interests: Node-based generative workflows (ComfyUI), custom pipeline automation, procedural image generation, human-in-the-loop creative tooling
	3D Foundations: Real-time engine frameworks, environmental blockouts, lighting, and camera composition
Pipeline & Programming	Languages: Python (3.13+), TypeScript, JavaScript, SQL
	UI & Frameworks: PySide6 (Qt for Python), Node.js, REST APIs
	Infrastructure: Git, GitHub Actions (CI/CD), PostgreSQL

FEATURED PROJECTS

AI Visual Development Study

Lead Artist & Workflow Developer

- Created concept exploration workflows combining generative AI, node-based scripting, and digital paint-over techniques to rapidly iterate on lighting and composition.
- Investigated node-based architectures (ComfyUI) to build repeatable, artist-friendly imagery pipelines.
- Documented the transition of AI-assisted concepts into traditional 2D/3D compositing steps, demonstrating a clear understanding of downstream production needs.

Plate — AI/VFX Pipeline Tool

Creator & Lead Engineer | github.com/edgarciaavfx/plate

- Developing a high-performance desktop application designed to streamline the ingestion and preparation of production footage for VFX and AI workflows.
- Engineered the native app utilizing Python 3.13+ and PySide6 integrated with FFmpeg for rapid sequence extraction, preview generation, and deep metadata inspection.
- Designed the tool explicitly to eliminate repetitive manual setups, helping artists iterate faster inside node-based compositing environments.

Production Asset Tracker

Creator & Lead Engineer

- Designed a ShotGrid-inspired production management platform tailored for assets, shots, and cross-departmental task tracking.
- Built real-time workflow visualization tools to maximize production visibility and communication across creative teams.
- Engineered stable data layers and pipeline backends supporting collaborative, multi-artist creative environments.

PROFESSIONAL EXPERIENCE

Ingenuity Studios Inc.

Digital Compositor (Contractor) • Oct 2021 – Oct 2024

- Delivered high-end compositing for feature and commercial productions while navigating massive, automated client pipelines.
- Collaborated closely with visual supervisors, CG/lighting artists, and pipeline engineers to quickly isolate and debug complex operational bottlenecks and script inconsistencies.
- Built efficient node-based solutions to integrate live-action elements with CG assets, maintaining rapid iteration cycles under strict deadlines.

La Covacha

Postproduction Artist • Apr 2020 – Apr 2021

- Engineered precise, logic-driven node environments inside Nuke and After Effects to streamline asset compilation and optimize rendering loops.
- Worked cross-departmentally in rapid iteration cycles, acting directly on feedback loops to maintain elite production standards.

MPC

Compositing Artist • Sep 2019 – Dec 2019

- Integrated highly complex CG elements and visual data into feature commercial packages, aligning work with strict zero-fault asset metrics and studio delivery standards.

LFT Studio

VFX Generalist • Dec 2017 – Jun 2018

- Built, optimized, and deployed 2D and 3D assets across short-deadline digital frameworks for commercial advertising.

EDUCATION

Vancouver Film School • Diploma, 3D Animation and Visual Effects

Universidad Marista • Bachelor's Degree, 3D Animation and Videogames

UNIAT • Professional Diplomas & Certifications:

- Digital Compositing in Nuke
- Modeling for Film (Maya)
- Modeling for Games (3ds Max)
- Video Game Programming (Unity)
