

EDGAR GARCIA PADILLA

FULL STACK DEVELOPER

Guadalajara, Jalisco, Mexico | +52 333 157 1406 | edgarciavfx@gmail.com
[linkedin.com/in/edgarciavfx](https://www.linkedin.com/in/edgarciavfx) | github.com/edgarciavfx | edgarciavfx.github.io

PROFESSIONAL SUMMARY

Full Stack Developer who builds end-to-end web applications with TypeScript, React/Next.js and PostgreSQL, backed by 6+ years of hands-on experience inside large-scale, automated production pipelines for international clients. Currently consulting independently on business analysis and custom software: mapping real operational processes, building financial and operations analysis dashboards, and shipping the internal tools that fix what the analysis finds — role-based management platforms, REST/API integrations and Python automation utilities. Known for diagnosing bottlenecks in live systems and delivering practical solutions for non-technical users under tight deadlines. Fully bilingual (Spanish native / English professional), based in Guadalajara.

TECHNICAL SKILLS

Frontend TypeScript, JavaScript (ES6+), React 19, Next.js 15 (App Router), Tailwind CSS, Shadcn/UI, Radix UI, HTML5, CSS3

Backend Node.js, Python 3.13+, Express, REST APIs, Server Actions, WebSockets, Zod validation, RBAC / authentication

Databases PostgreSQL, SQLite, MongoDB, SQL, Prisma ORM, Drizzle ORM, schema design & query indexing

DevOps & Tools Git, GitHub Actions (CI/CD), Linux / Bash, Railway, automated testing & deployment workflows

Desktop & Automation PySide6 (Qt for Python), CLI tooling, batch processing, FFmpeg / FFprobe, scripted data pipelines

Data & AI Reporting dashboards (Recharts), data cleaning & analysis, LLM / agent workflow integration (MCP, ComfyUI)

Languages Spanish (native), English (professional working proficiency)

PROFESSIONAL EXPERIENCE

Independent Consultant — Business Analysis & Software Solutions

Jul 2026 - Present

Data Analysis · Process Automation · Custom Software · Guadalajara, Mexico

- **Operations & financial analysis:** for a medical-apparel manufacturer supplying hospitals, consolidated raw sales, invoicing and accounting exports into a single analytical dashboard — surfacing, for the first time, a 99-day DSO, roughly half of invoiced revenue uncollected, a large balance aged past 90 days, critical customer concentration, and 330 data anomalies across disconnected systems.
- **Margin & revenue reconciliation:** cross-referenced real per-product margin against the published price list and reconciled the P&L against both invoiced and collected revenue, exposing discrepancies invisible in the client's spreadsheet-based reporting.
- **Process discovery & mapping:** ran structured stakeholder interviews across operations, administration and production, then mapped the complete order-to-invoice flow in per-role swimlanes, identifying single-person dependency as the primary structural risk.
- **Solution design:** scoped a mobile-first inventory system (QR label capture plus plain-language stock adjustments) built around how the operations lead actually works on the floor, instead of a desktop-only ERP assumption.
- **Second engagement:** defined requirements for document and template automation at a civil-law practice, translating recurring manual paperwork into an automatable specification.

Ingenuity Studios Inc.

Oct 2021 - Oct 2024

Digital Composer (Contractor) · Fully Remote (Los Angeles, USA)

- Worked daily inside massive automated client pipelines, collaborating with pipeline engineers, technical supervisors and artists to keep multi-team workflows running at scale.
- Investigated, isolated and debugged complex operational bottlenecks, script inconsistencies and data-integration failures in live, high-pressure delivery environments.
- Led cross-departmental data handling and asset troubleshooting, rapidly reading and adapting to internal codebases and pipeline architectures to sustain high-volume delivery.
- Delivered against strict client deadlines and quality gates for feature-film and commercial productions.

La Covacha

Apr 2020 – Apr 2021

Postproduction Artist · Guadalajara, Mexico

- Engineered logic-driven, reusable node environments to automate asset compilation and optimise render loops, reducing manual repetition across projects.
- Worked cross-departmentally in short iteration cycles, acting directly on stakeholder feedback to maintain delivery standards.

MPC

Sep 2019 – Dec 2019

Compositing Artist · Vancouver, Canada

- Integrated complex CG elements and visual data into commercial deliverables under zero-fault asset metrics and studio delivery standards.

LFT Studio

Dec 2017 – Jun 2018

VFX Generalist · Guadalajara, Mexico

- Built, optimised and deployed 2D and 3D assets across short-deadline commercial advertising projects.

SELECTED SOFTWARE PROJECTS

Production Asset Tracker

Full-Stack Web Application

github.com/edgarciaavfx/production-asset-tracker

- **Operations platform:** multi-user web application for tracking assets, tasks and workflow status across departments, with real-time visibility dashboards for team leads.
- **Architecture:** Next.js App Router with React Server Components and type-safe Server Actions for low-latency data operations.
- **Data & security:** PostgreSQL with Prisma ORM, composite query indexing and transactional unique-code generation; server-side Role-Based Access Control (RBAC) and Zod schema validation.

Plate

Desktop Automation Utility (Python)

github.com/edgarciaavfx/plate

- **Process automation:** collapses a repetitive multi-step manual workflow into a single guided operation, removing setup time and human error for end users.
- **Engineering:** cross-platform native GUI in Python 3.13+ and PySide6, with a background job queue for batch processing and a parallel CLI for scripted/unattended runs.
- **Integrations:** FFmpeg / FFprobe subprocess orchestration for media decoding, metadata inspection and automated file-manifest generation.

comfy-watch

Real-Time Monitoring CLI

github.com/edgarciaavfx/comfy-watch

- Terminal observability tool that connects to a remote service over WebSocket and streams live execution events, progress percentages and error states.
- Built in Python with MCP protocol integration and a raw-frame mode for low-level protocol debugging.

PlateTrack

Published Open-Source Package

- Authored and published a plugin to a public package registry (v0.1.0), passing automated validation and security checks; distributed as a one-click install for end users.

EDUCATION & TRAINING

Codecademy — Full-Stack Developer

Professional Certification · March 2026

100% completion of the full-stack curriculum: JavaScript/TypeScript, React, Node.js, Express, SQL & PostgreSQL, REST API design, authentication, testing and Git workflows. Credential ID 697BCFFA21. Completed alongside an intensive full-stack bootcamp.

Vancouver Film School

Vancouver, Canada

Diploma, 3D Animation & Visual Effects

Universidad Marista de Guadalajara

Guadalajara, Mexico

Bachelor's Degree, 3D Animation & Video Game Development

UNIAT — Professional Diplomas

Video Game Programming (Unity) · Digital Compositing (Nuke) · Modeling for Film (Maya) · Modeling for Games (3ds Max)
